

TS DIP Quick Reference

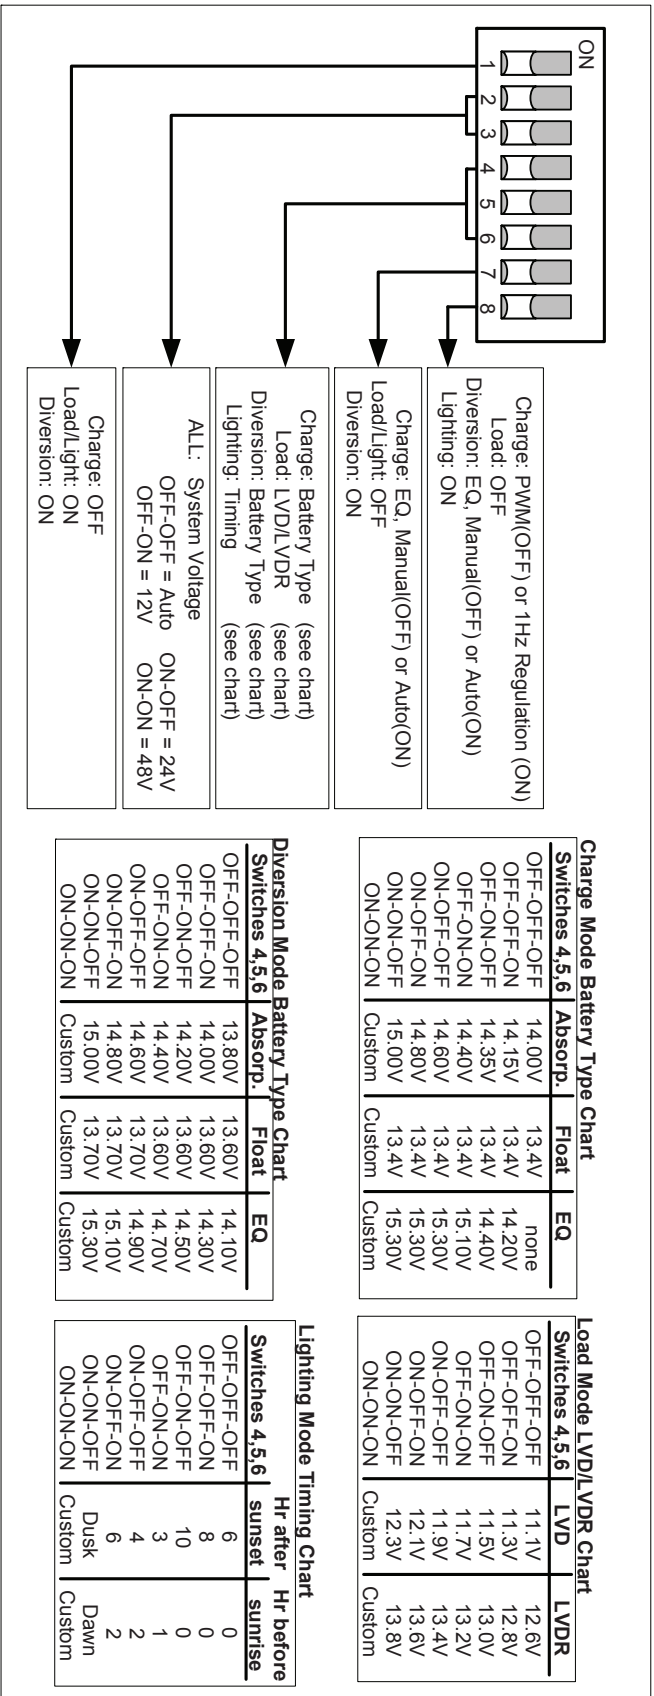

TriStar (PWM) DIP Switch Quick Reference

v01

Abstract:

A diagram and corresponding charts provide a quick reference for the various DIP switch settings available with the TriStar (PWM) controller models.

Note: Check with your battery manufacturer for appropriate charge voltage settings. If no default DIP switch charging setting is acceptable for your batteries, Morningstar's MSView software can be used to customize the charging voltages. The CUSTOM DIP setting is used when specifying custom charge settings with MSView.
