It is important to ensure that you are using the most up-to-date firmware with your EMC-1 device to take advantage of the latest features and improvements. You can upgrade your EMC-1 firmware by following the two steps below:

1. Access the latest firmware file by navigating to the **EMC-1 Support** page:

Then click the “Software” tab and click the download link.

The screenshot shows the Morningstar support website interface. On the left, there are filters for 'Rating' (Most Viewed, Highest Rated, What's New) and 'Product Info' (Product Library, Product Category, Product Name, SureSine). The main content area has a top navigation bar with tabs: DOCUMENTS, TECH NOTES, SOFTWARE (highlighted with a red circle), TRAINING, CAD FILES, and CORPORATE. Below this is a table of search results with columns: Title, Type, Language, Date, Version, and Rating. The first result is 'EMC-1 Firmware Update' with type 'application/zip', language 'English', date '04.24.2019', version 'v10 build 1', and a 5-star rating. Below the table, there is a section for 'EMC-1 Firmware Update' with a download icon and a red circle around it. The description states: 'This is the latest firmware update for the EMC-1. Update instructions are included with the download. This firmware update contains all fixes to date. Only the latest firmware update needs to be programmed into the EMC-1.'
