

Leading Solar Controller Brand Expands into Inverters

Responding to demand from top solar system designers and installers, Morningstar unveils its comprehensive new line of SureSine industrial-grade off-grid inverters

September 19, 2022:RE+/Solar Power International, Anaheim, California. With nearly 30 years of experience building industry-leading solar controllers behind it, Morningstar Corporation announced its long-anticipated expansion into the rest of the solar electric system chain with a complete line of new off-grid inverters. The SureSine Series takes its place alongside the company's renowned charge controller portfolio, giving solar installers the ability to keep their systems "all Morningstar" with no weak links in the component chain

The new SureSine DC-AC inverter line consists of six primary models, from 150W to 2500W, with 120, 127 or 230V output, 50 or 60Hz AC frequency, and 12, 24 or 48V DC input options. That wide range of choices, along with multiple AC terminal options, results in a total of some 70+ SureSine variations capable of providing remote power in mission-critical solar electric systems around the globe.

Pricing on the premium SureSine inverter line will be announced at RE+/SPI in Anaheim. Production starts in Fall 2022, with delivery later in the year.

The new Morningstar SureSine off-grid inverter line

"At first it might seem like a crowded field in which to introduce six more off-grid inverters," noted Morningstar CEO Lee Gordon. "But the difference is that these are 'the Morningstar of inverters.' That's not some slogan we made up— rather, those are *exactly* the words our customers use when

telling us what they need to match the quality of our charge controllers and design even better solar electric systems. With over four million products already sold in over 100 countries, we're confident that there's no shortage of applications for Morningstar inverters alongside our controllers."

Added Jim McGrath, Morningstar Director of Sales, "we went all-in with SureSine, to make the line the opposite of 'me-too' thinking. We started with industrial-grade build quality as a given, since so many Morningstar users are in that league. SureSine's are built around premium toroidal transformers for improved sinewave stability. We also made sure to include two hallmark Morningstar engineering features: fanless design and high efficiency. Next we added full communications capabilities, including USB, Ethernet, EIA-485, CANBUS, and Bluetooth for wireless communications, and Android and iOS utility apps for set-up and monitoring SureSine inverters with remote devices."

Morningstar SureSine inverter deployed in a remote telecommunications system

Continued McGrath, "finally, we secured industry-leading NRTL certification as well as meeting all relevant CE and UL requirements. After all, our solar controllers are already standard equipment in rural telecom, oil & gas, security, large-scale rural electrification projects, and other applications where failure isn't an option. We made sure the new SureSines live up to our long-established reputation."

About Morningstar Corporation

With over 4 million products installed and sold since 1993—in some of the most extreme environments and mission-critical applications in the world—Morningstar Corporation is the world's leading supplier of solar controllers and inverters. The US-based, privately-owned company is headquartered in Newtown, Pennsylvania, with an engineering research and development center in Maryland, and a global network of dedicated, best-in-class distribution and manufacturing partners. For more information visit www.morningstarcorp.com.
